EXPERIMENT 1

BAD UI AND GOOD UI

Bad UI Design

Features & Drawbacks Identified (Bad UI)

Flat & Outdated UI

- The profile screen uses a plain grey background with no visual depth.
- Lacks modern UI elements such as cards, shadows, or gradients.
- The interface feels dull and does not attract user attention.

Poor Visual Hierarchy

- All text elements (name, gender, DOB, mobile, email) are displayed in the same size and style.
- Important information like the user name is not highlighted.
- No clear distinction between primary and secondary details.

Unstructured Layout

- User details are displayed in a simple list format without grouping.
- Excess unused space makes the screen look incomplete.
- The “Family members” section is not clearly emphasized or separated.

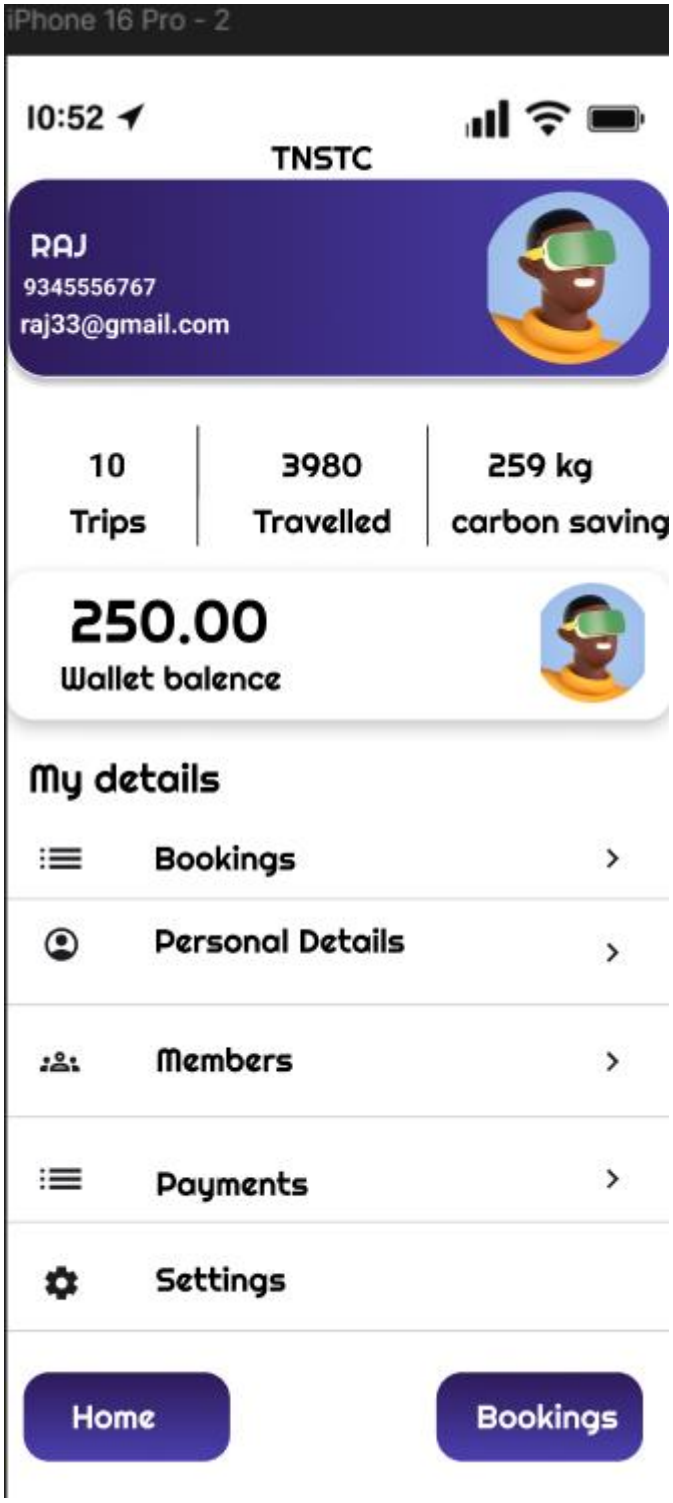
Lack of User Engagement

- No profile picture or personalization elements.
- Only a single “OK” button is provided, with unclear functionality.
- No quick access to important features like bookings or payments.

Poor Navigation & Accessibility

- No navigation menu or shortcuts available.
- Users cannot easily move to other sections of the app.
- The overall user flow is limited and inefficient.

Good UI Design



Features & Enhancements (Good UI)

Modern Header Design

- A visually appealing gradient header is added at the top.
- The header clearly displays the user name, phone number, and email.
- Creates a strong first impression and improves aesthetics.

Profile Picture Integration

- A circular profile avatar is added for personalization.
- The avatar is placed inside the header card, giving a modern look.
- Helps users quickly identify their profile.

Improved Visual Hierarchy

- Important information such as wallet balance is highlighted prominently.
- Profile statistics (Trips, Distance Travelled, Carbon Saving) are displayed clearly.
- Different font sizes and weights improve readability.

Structured Layout & Cards

- Information is grouped into cards with proper spacing.
- Menu options like Bookings, Personal Details, Members, Payments, and Settings are well organized.
- The layout looks clean and easy to scan.

Enhanced Colour & Contrast

- Uses a clean white background with dark text for better readability.
- Accent colours are used effectively to highlight key actions.
- Improves accessibility and reduces eye strain.

Better Navigation

- Bottom navigation bar provides quick access to Home and Bookings.
- Icons alongside text improve recognition and usability.
- Users can easily navigate through different sections of the app.
